

## ***Sulfur Series – RevV4*** ***Sulfur Removal System***

***“Water should be seen and heard not smelled.”***

Does your water smell like rotten eggs? Want to get rid of that smell from your water? The culprit is most likely hydrogen sulfide. Not only does it smell bad, but it tastes bad too. We have the ultimate solution! Our **elements sulfur series** system will safely eliminate the awful odor and taste throughout your home. Your water will smell good, look good, and taste good.

There are many benefits to using our **elements sulfur system**. Our single tank system effectively removes sulfur, manganese, iron bacteria, herbicides and pesticides from your water. We use a high quality catalytic carbon media and regenerate with hydrogen peroxide, which oxidizes substantially better and more effectively without the harmful by-products. This system is operated by our RevV4 valve, which has a ceramic disc design that the concentrated H<sub>2</sub>O<sub>2</sub> is not able to corrode or degrade along with programmable cycle times for maximum effectiveness.

### ***Benefits of our Sulfur System***

- Eliminates “rotten egg” smell from your water
- Cleaner, better tasting water for drinking and cooking
- Makes showering and bathing a clean and refreshing experience
- Fresher and whiter laundry without sulfur stains and odors in fibers
- Handles well over 5ppm sulfur
- No air injection system needed with the use of hydrogen peroxide
- Clean and environmentally friendly; uses the most effective oxidizer available
- Proven to be beneficial for septic systems in assisting aerobic bacteria
- Less regenerations required for system operation

## Sulfur Series – RevV4 Sulfur Removal System

### How it Works:

The *elements sulfur removal system* eliminates sulfur (hydrogen sulfide) from your entire home at point of entry (POE). Our system utilizes catalytic carbon and hydrogen peroxide to adsorb, oxidize and filter the hydrogen sulfide; removing it from your water supply.

- Catalytic carbon media effectively adsorbs hydrogen sulfide, chlorine, chloramine, and several other elements that do affect water taste, smell, appearance and quality
- Hydrogen peroxide solution is the most effective in oxidizing sulfur and bacterial iron
- Innovative RevV4 rotary valve with corrosion resistant ceramic disc design and programmable cycle options
- Up flow regeneration ensures highest level media contact
- Energy efficient – runs on 12 Volt power supply
- Automatic power outage programming memory recall with 72 hour back-up time memory

The *elements sulfur series* is available in various configurations and capabilities. Our highly qualified Hancscraft *elements* dealers will be happy to recommend the correct system that fits your needs.

We are committed to providing you with the best solution to your water quality problems. Contact us today to get the quality water you and your family deserve.
